

SulNOxEco™ Diesel Conditioner | *Eradicating the diesel bug...*

- All fuel becomes adulterated with 'free' water as it absorbs condensation - Fuel may contain up to 11% water
- Water settles at the bottom of the tank leading to growth of organic matter (the Diesel Bug) leading to sludge, corrosion
- A small quantity of SulNOxEco will isolate the water in an emulsified form

Removing the environment of diesel bug from fuel bunkers and generator tanks

Diesel Bug - Illustration

- Removal of the 'free water' and addition of SulNOx leads to:
 - Improved generator performance and reliability
 - Eradication of the Diesel 'bug'
 - Removal of the 'free water' and addition of SulNOx leads to:
 - Reduced toxic emissions
- End customers include fuel storage / bunker companies, commercial users of high volumes of diesel fuel and Operators of high-capacity machinery

... Improving resilience and combustion to reduce emissions from any Diesel tank or generator
